for export-oriented commodity-related projects with  
diversification components

## SURVEY OF THE QUALITY AND USEFULNESS OF UNCTAD PUBLICATIONS AND OF THEIR END-USERS

The UNCTAD secretariat, in the context of its programme evaluation activities and in response to inter-governmental requests, is seeking the opinions of end-users in order to have basic data for assessing the quality, usefulness and effectiveness of *inter alia* its research reports and publications. As the success of such an exercise is critically dependent on an adequate rate of response we should appreciate it if you would take time to answer the questions below and submit any other comments that you may have concerning the current document.

1. Title or symbol number of document .....

2. When did you receive the document? .....

3. How did you receive the document? (tick one or more boxes)

|                                                                           |                               |
|---------------------------------------------------------------------------|-------------------------------|
| Through Permanent Mission to United Nations ( )                           | From UN bookshop ( )          |
| From ministry or government office ( )                                    | From university libraries ( ) |
| Directly from UNCTAD secretariat ( )                                      | Own request ( )               |

## INTRODUCTION AND SUMMARY

1. The United Nations Conference on Trade and Development, in paragraphs 81 to 85 of the Final Act of UNCTAD VII, recognized that for most developing countries horizontal and vertical diversification of their economies, as well as increased participation in the processing, marketing and distribution, including transportation, of their commodities, was a long-term development objective towards which international co-operation between producers and consumers should be intensified. To this end, the Conference agreed on the need for adequate financial resources to implement diversification programmes, including processing, marketing and distribution activities. The Conference also called for an adequate expansion of official bilateral and multilateral resources, as well as private resources, including private investment, to finance appropriate diversification projects and programmes, possibly through special facilities for this purpose. In its agreed conclusions 25(XIII) the Committee on Commodities mandated the Working Party on Diversification, Processing, Marketing and Distribution, including Transportation to consider inter alia "adequate financial resources for diversification". The Working Party at its second session held in September 1989, decided that this issue should be considered at its third session.

2. Commodity-related export diversification has taken place in a limited number of developing countries, mainly the larger, more advanced ones. Most commodity-dependent developing countries continue to rely for the major part of their export earnings on a very limited number of primary commodities. In most of these countries there has also been very little diversification outside of the commodity sector, including for exports. As the discussions in UNCTAD have demonstrated, there is a general recognition of the need for increased assistance of various kinds - including financial - to support diversification efforts of developing countries.

3. This report considers the flow of financial resources to developing countries related primarily to export-oriented diversification efforts in commodities area, from both public and private sources. While the focus of the analysis is on export-oriented activities, this should not be construed to mean that investment in diversification both in commodities and manufacturing to meet the requirements of the domestic market is not equally or more important. Also, the emphasis is on investment resources as the issue of resources specifically for technical assistance and training was covered at the second session of the Working Party. Often, however, pre-investment assistance and training are part of the investments made and are not distinguishable as separate items.

4. Information on financial resources specifically for investment in diversification, processing, marketing and distribution activities is difficult to collect and to process. Most countries and institutions do not process data in a form which allows for clear identification of such flows. The governments and institutions which replied to the secretariat request for information made efforts to report their statistics in the form required for the study and their efforts show that useful data can be collected. Nevertheless the analysis in this report is seriously constrained by data problems, particularly with regard to foreign private capital flows for which no breakdown by the use of funds is possible and to bilateral financial flows on which information is very scanty and incomplete.

5. Chapter I makes an examination of sources of financial resources for promoting diversification efforts of developing countries. It shows that the limited savings potential and chronic shortage of domestic financial resources constitute a major constraint on investment for many, especially low-income

and highly commodity-dependent developing countries. Foreign private capital flows to developing countries for all purposes declined significantly during the 1980s. The sharp decline of commercial bank lending and export credits was not compensated for by the slight increase in foreign direct investment. Moreover, despite greater use of new forms of investment in the past decade and despite special measures to attract foreign private investment in almost all developing countries, foreign private capital flows continue to be concentrated in a limited number of countries and sectors, giving comparatively little attention to lower income, highly commodity-dependent countries and to the commodity sector at large - i.e. to countries and areas where such inflows seem to be most needed.

6. Many commodity-dependent developing countries have had to rely on official development finance from bilateral donors and international financial institutions for a substantial part of their investments. It is not possible to identify clearly how much of bilateral development finance has been directed to commodity-related export-oriented activities, although some indications in this regard were provided by a few governments. Information obtained from international financial institutions on their financing of investment in commodity-related export-oriented diversification activities shows that this finance has been about \$US 1 billion a year for the period 1984-88 (or about 5 per cent of their total annual commitments). This is a very rough estimate as the data from the institutions are not strictly comparable, and the export-orientation of projects is not always clearly identifiable. Moreover, this finance has again been concentrated on the larger, more diversified, less commodity-dependent countries where it is probably easier to develop projects. A considerable amount of these resources has gone to diversification into traditional export products such as cocoa, coffee, rubber and palm oil.

7. The highly commodity-dependent low-income countries are in a very disadvantageous situation in their efforts to attract external financial resources. No matter how liberal or transparent their investment laws are, they are not able to compete with countries with better support systems or larger domestic markets unless they have a particular advantage through a natural resource. And yet these are the very countries that have to diversify to reduce their dependence on one or two commodities for export earnings. Therefore, special efforts by the international community are needed to be able to identify areas, develop projects and finance them in these countries. Unless such efforts are made in a concerted, focused manner, adequate finance for projects to help reduce the dependency on a few export commodities in these countries will not be forthcoming.

8. Part of this special effort must be financial assistance for creating a domestic enabling environment including infrastructure, education, training and information. Another essential part must be for pre-investment assistance to elaborate diversification programmes and to identify and prepare projects in order to attract foreign partners. A third part must be to provide additional resources earmarked specifically for investment in the identified diversification activities. Without such financial assistance, it is unlikely that these countries will be able to get the resources needed to start diversifying their commodity exports.

9. Special efforts to earmark resources for diversification can be envisaged in several, non-exclusive ways. These include special funds or facilities on bilateral or multilateral bases, the possibility of which was recognized in the Final Act of UNCTAD VII. Such facilities can provide incentive or partner money for private or public investment. At the bilateral level such funds

could be part of or associated with the Public Development Finance Corporations of DAC countries. At the multilateral level special facilities could be established, either internationally through the World Bank or separately, or by a group of interested donors. There could also be increased and special emphasis on investment in diversification through the various regional and subregional development banks, especially as a needed complement to structural adjustment and sector adjustment lending of the World Bank. There could also be increased emphasis on diversification projects in bilateral programmes such as STABEX, SYSMIN and the Swiss Compensatory Financing Programme. These could also be viewed as directly commodity-related complements to adjustment programmes.

## Chapter I

### **SOURCES OF FINANCIAL RESOURCES FOR PROMOTING DIVERSIFICATION EFFORTS OF DEVELOPING COUNTRIES**

10. Diversification of commodity production and exports and among sectors of production can help reduce the vulnerability of a country to instability in commodity export earnings, provide an opportunity for using natural resources as a base for industrialization and thus for the development. Since the present prospects of economic transformation depend for a large number of developing countries on their commodity sector, the development programmes of these countries are often based on commodity diversification, aiming at changing patterns and a greater diversity of production and export, more extensive product transformation and growth in productivity.

11. Since national diversification efforts can only yield results over a period of time, they require medium and long term financing. Financing for diversification purposes involves much more than simply investments in productive and infrastructural facilities. It extends to expenditures in connection with project identification, pre-feasibility, feasibility and market studies, the costs of training, recruitment and management, the acquisition and adaption of technology, the establishment of distribution networks etc. - i.e. to all expenditures from the initial step in project idea right through to the production stage. This implies a mobilization of additional financial resources from both national and international capital markets.

12. The existence of sufficient domestic savings is an important factor in countries undertaking diversification efforts. One of the major constraints on investment in many and especially in highly commodity-dependent developing countries consists of a chronic shortage of own resources. In most, even relatively more advanced developing countries, the fragmented nature and limited size of capital markets is an important barrier to efficient development. The non-corporate sector (including households, unincorporated farm and non-farm business) generally accounts for the bulk of domestic savings and usually represents the only sector whose savings exceed investments. In a large number of developing countries the savings of this sector are still much lower than they could be and the way in which the financial surplus is transferred to deficit corporate and government sectors is not efficient enough because of structural shortcomings in financial institutions and instruments.<sup>1/</sup> Moreover, in the 1980s in many developing countries the domestic saving rate has declined sharply along with domestic investment rate - the national saving rate of these countries fell from an average of 27 per cent in 1976-1981 to 22.5 per cent in 1982-1988.<sup>2/</sup>

13. Savings performance, however, varied across country groups and individual countries. A number of relatively more advanced countries without external debt difficulties had high domestic saving rates and, as in the case of several newly industrializing countries of Asia, have in recent years become net exporters of capital.<sup>3/</sup> Most of low- and middle-income commodity-dependent developing countries, experiencing relatively weak export and economic performance coupled with debt servicing problems, largely aggravated by commodity price drops, recorded low and declining saving ratios. The national saving rate of the group of low income developing countries declined from 24.1 per cent in 1976-1981 to an average 16.9 per cent in 1982-1988, while many individual countries recorded a significantly lower level - in the period 1980-1987 fifteen LDCs experienced negative savings rates and another six LDCs had rates of lower than 5 per cent.<sup>4/</sup>

14. An increase in the domestic saving rate and the efficient channeling of resources into productive investments are preconditions for undertaking diversification efforts and accelerating economic development. A growing number of developing countries have been undertaking programmes to develop their financial markets, aiming to creating a legal, fiscal and institutional framework conducive to increasing the volume and efficiency of the flow and allocation of financial resources. These programmes usually include the creation of new and the strengthening of existing financial institutions. In particular the provision of much needed foreign and domestic equity capital was helped by the emergence of stock markets. In 1988 thirty five developing countries already had equity markets though most of them were small, poorly regulated and dominated by a few large traders.<sup>5/</sup>

15. In a number of countries with low domestic saving ratio, the government has played an important role in capital formation and sufficient investable resources to attract foreign partners were created with the help of public investment and ownership. In the commodity area government investment has been important primarily in the implementation of large-scale projects, requiring significant capital resources and related mainly to activities in agroindustrial, mineral and processing sectors. Governments also tried to stimulate local as well as foreign private investors through various investment incentive schemes, including guarantees and by enhancing the profitability of private investment by means of developing infrastructure and providing public services.

16. The scope and effectiveness of efforts to mobilize domestic resources face numerous and severe constraints in the majority of developing countries. Given the chronic shortage of own resources, their limited savings potential, heavy debt burden and taking into account that it will take considerable time before the necessary measures, however well designed and implemented they might be, will bring to desired results, in the foreseeable future many developing countries are not likely to be in a position to finance the development capital needs of diversification programmes and projects from their domestic savings alone. In this context the success of diversification efforts will depend critically and for an extended period on the magnitude and terms of external financial support these countries will receive. At the same time, foreign financing should contribute to domestic growth and to an increase in domestic savings which would in the long run reduce the developing country's dependence on external sources of capital.

17. While the amounts of official development finance and foreign private investment directed to commodity-related diversification activities is difficult to determine due to the lack of detailed data on aid and other financial flows, it appears to be rather small. The total amount of net financial flows to developing countries declined during the 1980s and by 1988 had shrunk in real terms to half of the level reached in 1981 - in 1988 it was estimated at \$93.5 billion compared to \$ 182.7 billion in 1981.<sup>6/</sup> Official financing of all kinds has remained practically stable in real terms and many commodity exporting countries have increasingly had to finance a substantial part of their investment from this source. While official flows represented about 35 per cent of total net flows in 1980, since 1986 they have been over 60 per cent in both real and nominal terms. Hence direct foreign investment has contracted noticeable in the 1980s whether it be directed to diversification activities or not.

18. There is little doubt that official development assistance (ODA) loans and grants include funds for commodity-related diversification projects although this can not be clearly identified.<sup>7/</sup> ODA is largely used for economic and social infrastructure and similar projects involving low profitability and a long pay-off period, i.e., in areas where the private rate of return is insufficient to attract risk capital. Thus it is providing general and indirect assistance to the commodity sector, contributing to the provision of conditions for the development of diversification activities and promoting direct investments in appropriate projects.

19. Bilateral donors contribute the major component of official financial flows to developing countries. Their development assistance is mainly at sectoral and project level and is provided directly, through host governments or local financial institutions with increasing attention given to recipient's adjustment efforts. With the exception of several public investment corporations, which lay emphasis on specific activities, including those related to commodity diversification in developing countries,<sup>8/</sup> development banks and other official institutions, funds and aid agencies supply loans and credits to or invest in projects without specifically orienting their assistance to diversification or commodity-related purposes. International financial institutions, for their part, focus their assistance on broad macro-economic aspects or on individual development projects without having special programmes geared to diversification in the commodity field. An analysis of the finance made available by bilateral donors and financial institutions to commodity-related export-oriented diversification based on information provided to the secretariat is contained in chapter II.

20. With regard to foreign private capital flows to developing countries, the existing data do not permit an identification of finance directed to commodity-related export-oriented diversification activities. While the direction and size of overall finance disaggregated by kind of flow is reported, there is no way of knowing how much of bank lending, direct investment or capital market borrowing was for these activities, nor which commodities were involved and in which countries. Information provided by governments in response to the request by the secretariat did not contain any data on private flows.

21. The 1980s have witnessed a sharp decline of foreign private capital flows to developing countries resulting mainly from a collapse of commercial bank lending. External borrowing, particularly from commercial banks, grew rapidly in the 1970s and was largely undertaken either by governments of developing countries to finance balance of payments and fiscal deficits, or by state enterprises for financing the external part of their generally large investment programmes, including those related to the development of the commodity sector. The collapse of debt-creating bank credit in response to the debt crisis was accompanied by an even sharper reduction in export credits, the net flows of which in 1986-1988 turned negative for about a half of developing countries.<sup>9/</sup> This fall resulted from a number of factors including that of the reduced demand for export credits as a source of financing new mining projects in developing countries due to low international demand for minerals.<sup>10/</sup>

22. The decline of bank lending and export credits resulted in an increase in the relative importance of direct and portfolio equity investments as a source of private capital. While FDI flows to developing countries have shown some increase from a low of \$8.8 billion in 1985 to around \$ 20 billion in 1987 and 1988, their volume in real terms in 1988 (for OECD countries also in current terms) did not reach the record level registered in 1981.<sup>11/</sup> Moreover,

owing to a massive inflow of FDI to a handful of offshore centres, the flows to other developing countries, including highly commodity-dependent and other countries where such flows seem to be most needed, considerably decreased since 1982 - from \$17.7 billion in 1981 to \$3.5 billion in 1985 and rose only to \$7.7 billion in 1987 at 1987 prices.<sup>12/</sup> The role of services in the structure of FDI has substantially increased, accompanied by a declining relative importance of agriculture and mineral-related activities.

23. Until mid-1980s relatively less attention was given to the possibilities offered by portfolio equity investments which remained at a rather small level. Although the overall size of such investments is still relatively modest, there has been a significant growth in recent years, which was promoted by the activities of the IFC assisting, in particular, in the establishment of a number of mutual funds with the aim of investing in corporate equity of selected developing countries.<sup>13/</sup> However, commodity-related diversification projects apparently do not constitute an important sector of portfolio investments.

24. Foreign investors have also been increasingly utilizing new forms of investment such as minority equity investments, the provision of management and technical services, licencing, and subcontracting with a view of diffusing and minimizing the exposure to high commercial and other risks associated with traditional investments in the commodity sector of developing countries. Some large and relatively experienced local public companies undertaking the development of export-oriented commodity diversification projects have used these forms to get or improve their access to international commodity and/or financial markets, as it might be evidenced by the experience of Brazilian CVRD in the development of Albras-Alunorte alumina/aluminium complex.<sup>14/</sup> Such companies now also have the possibility of arranging commercial bank loans, especially for mineral development, in conjunction with long-term swap arrangements for hedging the price of future output. The swaps in essence provide a means of guaranteeing repayment of loans.

25. In an effort to encourage capital inflows, particularly those of a non debt-creating type, practically all developing countries have opened up their economies to foreign direct and/or portfolio investments by means of establishing liberal investment regimes and introducing new incentives. However, in many cases these efforts do not seem to have brought to desired results. In recent years sizeable foreign investment was concentrated in a limited number of countries that have a large domestic or regional market, are rich in natural resources or have significant advantages as a base for export-oriented production.<sup>15/</sup> Most other countries have had to rely for a substantial part of their investment, including that in the commodity sector, on official flows.

## Chapter II

### RESOURCES MADE AVAILABLE AND AREAS FOR FURTHER ATTENTION

26. To assist the Working Party in its examination of the issue of adequate financial resources for diversification, the secretariat has attempted to collect information on the amount of resources actually being channelled to this area. In this regard a note and a reminder note were sent to all States members of UNCTAD on 30 November 1989 and 7 May 1990, requesting information on recent official bilateral and private resources made available or received for diversification projects and programmes. In addition, the secretariat contacted a number of international and regional financial institutions to obtain information on financial resources they provided to developing countries for diversification, processing, marketing and distribution of commodities. The analysis below is based on the information collected. However it is severely constrained by the lack of detailed data particularly with regard to bilateral assistance and private investment flows.

27. As of 1 August 1990, replies concerning official bilateral financial flows only had been received from six developed market-economy countries (Federal Republic of Germany, Finland, Japan, Norway, Switzerland and United Kingdom). The reply of the Federal Republic of Germany indicated that this country has, among other activities, a wide array of projects aiming at improving developing countries' capacities to explore and exploit non-traditional mineral resources. Finland has financed a series of seminars to promote marketing activities through the Programme for Development Co-operation. The reply of Japan indicated that this country has provided official bilateral resources to finance various projects in agricultural and mineral sectors of a number of developing countries, especially those of Asia. Development studies and technical co-operation activities constitute a significant part of government assistance, the bulk of which is provided in the form of grants. A substantial share of Norwegian bilateral aid has been allocated to the commodity sector of developing countries, with agriculture and fisheries receiving a combined share of around 20 per cent in the 1980s. Projects in this and some other sectors generally have contributed to horizontal or vertical diversification of commodity production, though diversification has seldom been an explicitly stated aim of Norwegian bilateral development co-operation. Swiss governmental agencies have executed several projects in collaboration with other organizations such as the ITC, ITTO, IJO, World Bank, International Institute for Cotton, Asian Development Bank and with partner institutions in other developed countries. Also the Swiss Government has devoted \$17.2 million to assistance for least developed African countries through its Compensatory Financing Programme. The reply of the United Kingdom contained information on project aid (excluding allocations for technical co-operation projects and components), provided by the Overseas Development Administration and Commonwealth Development Corporation. Although it was not possible to identify projects with diversification components on the basis of this information, it may be noted that commodity-related sectors possibly involving export activities - i.e. agriculture and livestock, forestry, fishing, mining and agricultural processing - accounted for about 16 per cent of total project aid expenditures for the period 1980-1988.

28. Replies have been also received from two developing countries - Iraq and Venezuela. Iraqi authorities have reported that they had not received any additional official resources for activities concerning marketing and distribution of commodities. The reply of Venezuela indicated that commodity-related diversification activities are envisaged in that country's investment programmes, and that these are expected to be partly financed by the Inter-American Development Bank.

29. The currently available data on financial flow to commodity-related export-oriented diversification activities relate almost exclusively to allocations provided by major international and regional financial institutions. Although these institutions do not focus special attention on diversifying commodity production and exports, they encourage diversification in developing countries through direct involvement in financing of specific programmes and projects, as well as pre-investment and technical assistance activities, stimulate capital inflows, and act as mediators in attracting private partners for investment needed and technology required. A mere involvement of a major international or regional financial institutions in a project, whatever the extent and nature of its commitment, generally gives a feeling of greater security to investing firms and provides encouragement to aid agencies. International financial institutions by supporting macro-economic policy reforms and overall development programmes of developing countries can also contribute to the success of efforts in creating frameworks conducive to increased capital inflows to commodity-related diversification activities.

30. As of 1 August 1990 replies to the secretariats' to request for information had been received from the Arab Fund for Economic and Social Development, Asian Development Bank, Banque Ouest Africaine de Développement, Central African States Development Bank, European Investment Bank, Inter-American Development Bank, International Finance Corporation, Islamic Development Bank, OPEC Fund for International Development, and the World Bank. Information on financial allocations prepared in consultation with these institutions is contained in the tables of the statistical annex. Additionally, information on the African Development Bank was prepared on the basis of its annual reports. Also data on STABEX allocations was prepared in consultation with the Commission of the European Communities.

31. These annex tables should not be considered as a complete set of individual institutions' allocations for projects promoting commodity-related export-oriented diversification as some diversification efforts may not have been referenced in project descriptions. On the other hand, for many of the reported projects export-oriented diversification activities take only a part of total project commitments which in most cases could not be specified due to the inadequacy of data available. Caution should be used in interpreting several tables, as information provided by some institutions does not always allow separation of export-oriented or commodity-related activities. Moreover, the international (mainly regional) development banks provide considerable amounts of financing in the form of credit lines to national development banks for onlending to the local private sectors. It is usually not possible to determine whether or not such loans were used for export diversification purposes. Notwithstanding these caveats the reported figures are probably an overestimate of finance made available for export-oriented diversification activities, and the analysis below would more than likely be confirmed if more detailed information were available.

32. It is clear from the annex tables that the World Bank Group (World Bank and International Finance Corporation) together with the regional development banks have been the major sources of finance for diversification. Tables 1 and 2 summarize the information on these five institutions for the 1980s in terms of the major characteristics of the finance they have made available.

Table 1: Distribution of commitments for major international financial institutions

| Years | World Bank                                               |                                                                     |                                    |             | IFC                                                      |                                                                     |                                    |             |

a/ Not necessarily export-oriented diversification projects

33. Table 1 provides an overview of the annual commitments of these major financial institutions identified as related to commodity export diversification. This table shows that none of these institutions have put a heavy emphasis on this type of lending. However the percentage of total commitments by the World Bank (and the IADB) are lower than the percentage commitments by the other regional banks. The decline in the share of such finance in World Bank lending from around 7 per cent in 1980 to under 2 per cent per year since 1986 can partially be explained by its recent emphasis on structural adjustment and sector adjustment programmes. However even with this decline the World Bank has been the most important source of funding for export diversification activities. It is also recognized that by virtue of its dominant role in lending for agricultural development the World Bank is a major participant in the debate over diversification in this sector and has recently emphasized rural diversification as a main element in agriculture's adjustment to new market conditions.<sup>16/</sup> The emphasis on commodity export diversification commitments from the IFC has averaged around 10 per cent of total commitments in recent years. This is the highest average of these five institutions and the amounts involved have been growing.

34. With regard to the World Bank Group (World Bank and IFC), the summary in table 2 of regional and country distribution of lending shows a high degree of concentration on a few, relatively large developing countries which already have a diversified commodity export base. For the World Bank, five countries (four from South East Asia) had 24 projects accounting for 55 per cent of the lending, whereas 21 least developed countries had 28 projects accounting for 17 per cent of lending. It is also noted that the individual shares of the lending for commodity export diversification received by these five countries is much higher than their shares in total World Bank lending. It is of course easier to identify viable commodity diversification projects in developing countries which already have a supportive domestic environment and infrastructure and whose entrepreneurs are used to dealing with export markets. However it is clear that a significant part of World Bank lending in countries without such advantages should be on helping them develop to the same stage. It is also evident from the data provided in Annex Table 1 that the commodities into which diversification has been financed in the major recipient countries in Asia have often been traditional commodities (cocoa, coffee, rubber, palm oil) which have in the eighties become in oversupply on world markets. Such projects inevitably have direct impacts on world markets; usually much more significant impacts than activities for the same commodities in small countries. It is interesting to note that the number of projects involving agricultural commodities has not varied very much over the years, whereas the number of projects for minerals has declined and most of the recent ones were not in traditional export minerals.

35. The IFC activities have been concentrated up to 50 per cent of the total in 4 countries, two of which are the same as for the World Bank (Brazil and Thailand) and the other two of which are more developed, diversified Latin American countries (Chile and Argentina). As the IFC is involved with both loans and equity participation for the promotion of private sector development, it is not surprising that its activities are centered mainly in countries with established or growing capital markets. Seven LDCs had 10 projects accounting for under 3 per cent of commitments. It is important to note, however, that IFC projects in its major recipient countries were principally for commodities other than those mentioned above (i.e. cotton, timber and non-traditional agricultural commodities).

36. Regional and subregional development banks, being mostly content at leaving macro-economic issues to the World Bank and IMF, provide assistance mainly at sectoral and project level. Economic diversification is often mentioned as one of the objectives of various programmes and projects implemented with financial participation of these institutions. However, the majority of projects with diversification components are not specifically oriented to external market and generally do not result in diversification of commodity-related export earnings. It is significant, however that the regional development banks show distinctly different profiles. The Asian Development Bank has been involved mainly in projects in the agricultural sectors of its larger developing country members (5 accounting for over 90 per cent of the commitments) with a significant number of projects in the same four traditional commodities as the World Bank. The African Development Bank has had a wider spread of projects over countries and in commodities. The five most important countries accounted for just under 50 per cent of commitments and all of these are countries where the need to diversify commodity export earnings is clearly evident. The lending by the African Development Bank to LDCs was somewhat higher than that of the other institutions, at 27 per cent to 13 LDCs. The Inter-American Development Bank has made commitments to 14 member States, five of these accounting for over 65 per cent. Interestingly, none of these five are the same as those receiving finance from the World Bank or the IFC.

37. The European Economic Community finances projects in ACP countries out of the European Development Fund (EDF) and by loans from the European Investment Bank (EIB) which also provides finance for development assistance to Mediterranean countries.<sup>17/</sup> The EIB has devoted over 20 per cent of the resources made available to developing countries to commodity-related activities. The diversification orientation of these projects is not identifiable. Least developed countries have received about 20 per cent of total, and Mediterranean countries, another 20 per cent. The bigger projects have been in the larger, more diversified economies of Algeria, Egypt, Morocco and Nigeria.

38. The subregional development banks in Africa have reported that they have financed projects for commodity export diversification accounting for approximately 10 per cent of their commitments. In both cases the commodities involved are new or growing ones and there is a clear emphasis on expansion or rehabilitation of processing activities. The recipient countries clearly reflect the memberships of the banks; least developed countries accounted for three quarters of the commitments of the Banque Ouest Africaine de Développement. The amounts involved and the number of projects are quite small, but the trend is encouraging.

39. The Arab Fund for Economic and Social Development has devoted on average 9 per cent of its commitments to export-oriented commodity diversification, mainly for production and processing of fish in several countries and rehabilitation of cotton processing in Sudan. The OPEC Fund for International Development has supported several projects, mainly in least developed countries for the rehabilitation of production and processing of traditional exports or the expansion of primary production of new exports, accounting on average for 5 per cent of total annual commitments in the 1980s. The Islamic Development Bank has not put much emphasis on this area (an average of 1 per cent of total annual commitments), with the projects financed being for expansion of traditional commodities or production of new products, often in the form of pre-investment assistance.

40. The use of STABEX transfers for diversification purposes has to be specified by a government in its application for a transfer; most transfers are used in the sector suffering an export earnings shortfall.<sup>18/</sup> However several countries have used part or all of a transfer for encouraging new products or expanding the production of secondary ones - always, as required by the system, within the agricultural sector, with an average of 9 per cent of transfers being used in this way in the 1985-87 period. This is an interesting way of earmarking funds for such purposes, but clearly provides only seed or topping up funds for most projects.

41. Several other multilateral institutions, while not actually financing investment, provide valuable financial and other assistance for preinvestment activities related to commodity export diversification. UNIDO, the ACP-EEC Centre for the Development of Industry (CDI) and the Commonwealth Fund for Technical Co-operation (CFTC) have provided assistance for preparation of studies, technical assistance, training, and the finding of prospective foreign partners, in particular for development of processing projects. The focus of such institutions is, of course, much wider than commodity export diversification and it is difficult to identify the proportion of their assistance devoted to this area. UNIDO has a wide range of relevant activities, including a pre-investment studies programme, an investment promotion information system, a series of investment promotion offices in developed countries, and the sponsoring of Investors' Forums in developing countries. CDI has primarily been involved in promoting small-scale domestic-oriented projects, with export orientation being minor until the most recent years. The CFTC has helped a number of Commonwealth developing countries prepare projects and find investment resource in commodity-related areas.

42. This brief overview of the resources made available by financial institutions, mainly development banks, raises certain questions. Firstly, with the help of the financial institutions it has been possible to identify resource flows for commodity-related diversification activities, with some export-orientation, of roughly \$1 billion per year for the period 1984-1988 (representing approximately 5 per cent of their total annual commitments). Such an amount is small in relation to the needs of developing countries in the horizontal and vertical (processing) diversification of their commodities and their marketing and distribution. Secondly, much of this finance has gone to the larger, more advanced developing countries which are usually also the ones with fairly diversified export bases. It is of course important for these countries to continue to develop and diversify, and to receive assistance. But it means that extra, special efforts are required for highly commodity-dependent countries which rely on one or two commodities for the virtual totality of their export earnings. Unless special efforts are made in a concerted, focused manner, adequate finance for projects to help reduce such dependency is unlikely to be forthcoming. The initiative by Japan at UNCTAD VII calling for a series of round tables focusing on promoting processing of commodities in commodity-dependent low-income countries reflects an awareness of this problem and the need for concerted international action for tackling it.

43. Development banks are likely to continue to place emphasis in their project lending on ability to repay, which will favour certain countries and types of projects. A change in focus would of course require, as in the past, agreement of all members and possibly new facilities. If the international community is serious about its desire to help countries heavily dependent on a limited number of commodities for their export earnings in order to reduce their vulnerability to events beyond their control, then introducing

mechanisms to allow for a specific focus on export-oriented diversification project and programme lending should be considered. It is noted that initiatives such as STABEX and SYSMIN which give grant assistance, albeit very small, do have the advantage of being specifically commodity-directed, though not necessarily diversification-oriented.

44. Suggestions have recently been made to establish specific diversification funds for groups of recipient countries, in particular for Africa. Such funds might provide a way to encourage countries which have problems in attracting foreign private investment and project loans from international institutions to develop diversification projects, by providing them with a reserved pool of finance.

World Bank, Technical paper No.117, Washington, D.C. 1990; Agricultural Diversification. Policies and Issues from East Asian Experience, Policy and Research Series No.11, Washington, D.C. World Bank, Wash. 1990.

17/ The EDF subsidises special rates on loans given by the EIB, which also manages the EDF's risk capital.

18/ Under the Fourth Lomé Convention the priority is using STABEX funds (all funding is in the form of grants) is given to the sector that has recorded a loss in earnings from exports to the EEC countries. However, whenever appropriate, for example in order to adjust to changed long-term conditions on the world markets, use for other appropriate sectors, in particular agricultural, is possible. In any event, the term "sector" is to be understood in a very large sense, including all activities in the area of processing, marketing and distribution and transportation of the product concerned. The Fourth Convention also facilitates the provision of aid for the purposes of diversification accorded in grant form from SYSMIN.

SOURCE: UNCTAD secretariat calculations on the basis of information provided by international financial institutions and/or their annual reports. The format of the tables is not identical depending on areas in which institutions are active.

NOTES:

1. Rehabilitation (R); New Project (N) - commodity, contributing for less than 5 per cent of export earnings in 1977-1981; Expansion of secondary export product (E) - commodity, contributing for 5-20 per cent of export earnings in 1977-1981.
2. Including programmes (P) and Credit Lines (CL).
3. Loans (L); Grants (G) or Equity (Eq).
4. Commitments to all, including non-commodity sectors in all developing countries.
5. Component costs for agricultural projects represent base costs without physical and price contingencies. Projects with component costs represented here are those which have components specifically designed to promote diversification or projects which have diversification as one of their primary objectives. For minerals-related and some agricultural projects promoting export-oriented diversification component costs have not been specified.
6. Including programmes (P), Credit Lines (CL), allocations for the dissemination and implementation of research results and administrative expenses.
7. Including component costs which do not relate to export-oriented diversification (social development components, etc.).
8. Share of projected sales on international market; e-estimate; N/I - no information available.
9. Overhead costs such as administrative offices, housing for employees, project management, preoperating expenses, etc.
10. No necessarily related to export-oriented diversification.
11. Calculated on the basis of ECU/US dollar exchange rates for appropriate years.
12. Not necessarily directly related to commodity projects.
13. CDI assisted with project promotion, preparation of studies, technical assistance and training. Investments mentioned are financed from different sources (local and foreign private equity, development finance institutions, commercial credit, etc.).
14. In all, including non-commodity sectors in all developing countries.
15. The total cost of the cotton project in Sudan in 1984, 1985 and 1986 refers to the same project.

16. Initial commitment, later cancellations have not be deducted.
17. From 1 October to 30 September.
18. Equipment for individual enterprises.
19. By 30 April 1990.
20. Calculated from Commission of the European Communities. Commission report on the operation during 1988 of the export earnings stabilization system set up by the Third Lomé Convention.
21. For 1983-1987 within and outside commodity sector; for 1988-1989 only within commodity sector.
22. Calculated on the basis of F CFA/US dollar exchange rate.
